

# Adding a weed to be managed

Click on the **Weeds** tab under your project title, then click on **Add new ...**. A list options will appear, choose **Weed**.

WeedManager will zoom out to show your entire project and you will see the weed entry form and map tools. Zoom in and pan to where the target weed occurs. Choose the map tool to either draw a polygon, line or circle marker to identify the location of the target weed. The example below shows data entry where 30% of the area is covered in 2m high adult blackberry. **Save** to finish data entry.

✓ Save

An aerial photograph of a forested area. A yellow polygon outlines a specific region of interest. Inside this region, a yellow circle is located in the lower-left corner. A dashed white line runs horizontally across the top and bottom of the image, likely representing a road or boundary. The forest is dense and green, with some darker patches indicating different types of vegetation or shadows.
