

# Project settings

If you have created your own project, or are an administrator of a project, you can change project settings.

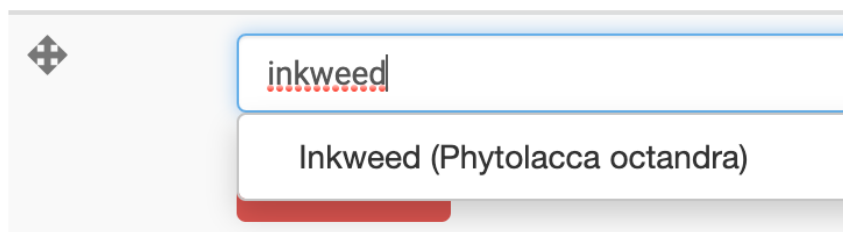

1. Go to **My Projects** and click on the name of your project.
2. Click **Settings** in the project menu.
3. The **About**, **Location**, and **Sharing** tabs allow you to edit the information you entered when creating the project.
4. The **Species** and **Herbicides** tabs are described below.

## Using the Species tab

WeedManager is preloaded with a list of weed species. You can customise this to make a shortlist for quick and easy access when adding weeds via the website or the app.

1. Click the **Species** tab to select weed species you are managing for this project.
  - Weed species not listed here can still be managed, but selected species will be shortlisted to appear at the top of the lists.
2. To add a weed to the shortlist, start typing its name (either common or scientific). Matching weeds will appear in the dropdown.
3. Select the weed and click **Add another weed species** to add additional species, or click **Save** to finish.
  - If a weed does not match the preloaded list, double check the spelling.

## Project weed species

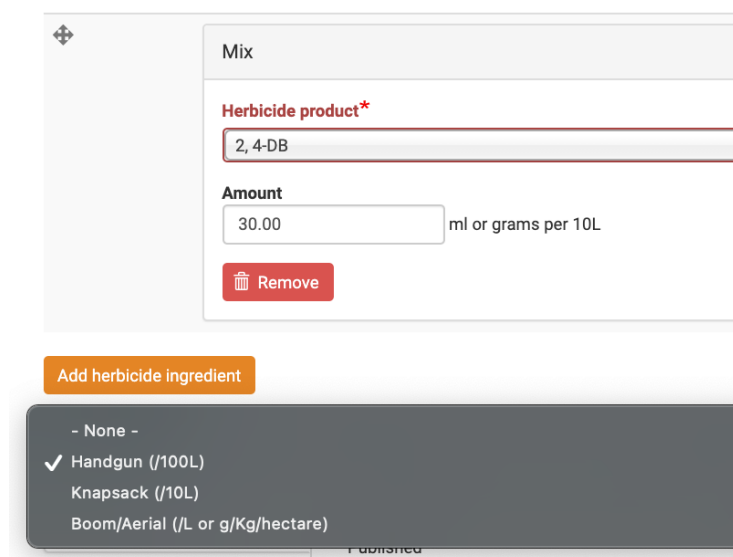

A search interface for weed species. On the left is a grey sidebar with a crosshair icon. To its right is a search bar containing the text 'inkweed'. Below the search bar is a dropdown menu showing the result 'Inkweed (Phytolacca octandra)'.

Add another weed species

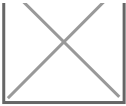

## Using the Herbicides tab

WeedManager is preloaded with a list of herbicides and allows you to create customised herbicide mixes.

1. Click the green **+ Add new mix** button.
2. Give your mix a helpful **Name** (eg. "Blackberry TBXT") and optionally a more detailed **Description**.
3. Under **Mix** you can create a custom mixture.
  - Select the first Herbicide product you want to include in your mixture
  - Choose the **Amount** per 10 litres (in ml or g)
  - Click **Add herbicide ingredient** and repeat for the remaining ingredients.
  - Choose an **Application Method**
4. When your new mixture is complete click **Save** to finish.

The interface for creating a herbicide mix. It features a sidebar with a crosshair icon. The main area is titled 'Mix' and contains a form with the following fields: 'Herbicide product\*' with a dropdown menu showing '2, 4-DB'; 'Amount' with a text input showing '30.00' and a label 'ml or grams per 10L'; and a red 'Remove' button with a trash icon. Below the form is an orange button labeled 'Add herbicide ingredient'. At the bottom is a dark grey dropdown menu for 'Application Method' with options: '- None -', '✓ Handgun (/100L)', 'Knapsack (/10L)', and 'Boom/Aerial (/L or g/Kg/hectare)'.

As an example, you should see something like this after creating a mix or two

Herbicide mix *Woody weeds by boom* has been created.
